

ECORAIN™ TANK SYSTEMS CASE STUDY

Gravel Pavers

Edward C. Little Water Recycling Facility, El Segundo, CA

The West Basin Municipal Water District in September 2009 removed the plants in front of the facility that required irrigation and replaced them with an EcoVoid HD 2" Gravel Paver walkway and water-efficient plants. They also installed EcoRain Tanks under the roof downspouts to infiltrate rain water on site.

- Four EcoRain Single Tanks are buried beneath the roof downspouts to capture rainfall for infiltration on site.
- 350 square feet of ET-1401 EcoVoid HD 2" Cells/Gravel Pavers keep the gravel in place with no divots
- Volunteers helped install the EcoRain Tanks, Pavers and landscaping.
- Pamela Berstler of Flower to the People designed the landscaping and Barbara Engel of Sunshine Greenery Inc was the Contractor.
